

Epic Lasers - configuration file

Tristan LOUET

March 30, 2013

1 Introduction

The configuration file is a text file used to store the current configuration of the Epic Lasers client. It is useful for the program as it can read the file and configure the program (for example the number of samples used for the anti-aliasing).

2 Structure

The config file ignores all lines that begin with a '#' so that such lines can be used as comments. Otherwise, a line is interpreted and must be structured as this :

keyword=value

All associations of keywords and values are exhaustively listed below :

- antialiasing={true,false}
- antialiasing-samples={2,4,6}
